

G. Shyam Prasad Reddy

Backend Developer (Java | Spring Boot)

Bengaluru, India • +91 7702277931 • shyamprasadreddyginkala@gmail.com • [LinkedIn](#) • [GitHub](#)

PROFESSIONAL SUMMARY

Backend-focused Software Engineer with hands-on experience architecting microservices-based systems using Java and Spring Boot. Designed and implemented the full backend of a production-grade AI-powered LMS — including domain-driven service decomposition, RESTful API design, JWT-based authentication, and event-driven inter-service communication. Strong foundation in system design, clean architecture, and API engineering; seeking an entry-level backend role to deliver scalable, maintainable software.

TECHNICAL SKILLS

Languages: Java, TypeScript, SQL, HTML, CSS

Backend: Spring Boot, Hibernate (JPA), REST API Design, Microservices Architecture, JWT Auth, RBAC, Event-Driven Architecture

Databases: MySQL, MongoDB

Frontend: Angular

Tools / DevOps: Git, Docker, Kubernetes, Maven, Postman, Swagger / OpenAPI

Core Concepts: System Design, Domain-Driven Design, Clean Architecture, API Gateway Patterns, Service Decomposition

PROJECTS

Skillora — Adaptive Learning Management System | [GitHub](#)

Jan 2026 – Feb 2026

Java · Spring Boot · Microservices · MySQL · MongoDB · JWT · Docker · REST APIs · Event-Driven Architecture

- Decomposed a monolithic LMS concept into 3 independently deployable microservices (User, Course/Content, Enrollment) using domain-driven design, cutting inter-service coupling and enabling independent scaling of each domain.
- Built 15+ RESTful endpoints across services covering course delivery, enrollment workflows, and user interactions; standardized request/response contracts with OpenAPI/Swagger documentation.
- Implemented JWT-based authentication and role-based access control (RBAC) with 3 distinct roles (Student, Instructor, Admin), enforcing fine-grained authorization across all service boundaries.
- Engineered a hybrid communication model — synchronous REST for real-time queries and asynchronous event-driven messaging for enrollment state transitions — reducing direct service dependencies by ~40%.
- Designed extensible schema supporting future AI recommendation engine integration, with pluggable learning-pathway hooks requiring zero changes to existing service contracts.

DropNow — Ride-Hailing Platform | [GitHub](#)

Mar 2025 – Apr 2025

Java · Spring Boot · Angular · MySQL · REST APIs · Layered Architecture

- Built a full-stack ride-hailing platform end-to-end, delivering rider and driver modules with real-time ride request management and status tracking via Spring Boot REST APIs.
- Implemented core business logic for ride allocation and workflow orchestration using a Controller–Service–Repository layered architecture, achieving clean separation of concerns and enabling unit-testable service components.
- Exposed 10+ REST API endpoints for ride booking, user management, and authentication; integrated Angular frontend consuming all APIs with seamless data binding and reactive state management.
- Applied input validation, error handling middleware, and structured exception propagation, reducing unhandled runtime errors and improving API reliability.

EDUCATION

GITAM Deemed University — Bengaluru Campus

B.Tech. in Computer Science

CGPA: 7.68 / 10.0

Bengaluru, India

Sep 2022 – Jun 2026

CERTIFICATIONS

- Master Java Spring Boot & JPA with Projects** — Built REST APIs with Spring MVC, integrated Swagger, AOP, Actuator monitoring, and Logback logging | [Certificate](#)
- MongoDB Atlas & NoSQL Specialization** — Deployed and managed Atlas clusters; designed document schemas, full-text search indexes, and autocomplete pipelines | [Certificate](#)
- Object-Oriented Design — University of Alberta** — Applied OOP principles, UML modeling, and CRC design; evolved an Android app with improved modularity | [Certificate](#)
